

Module 2
Subtopic 1

Communication Principles and Ethics

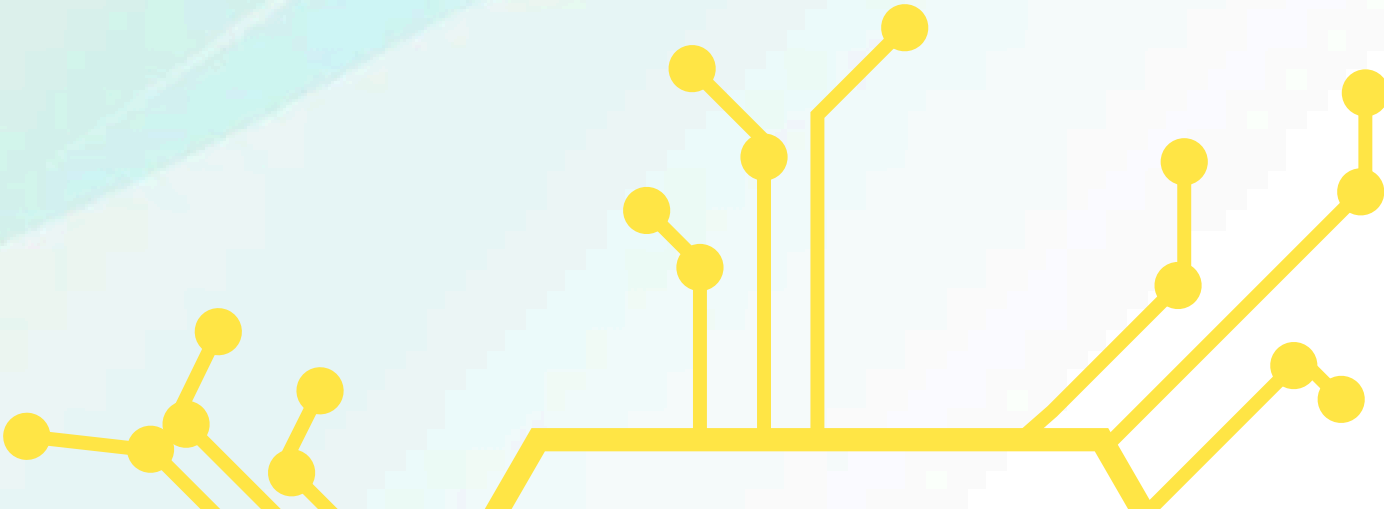

Intellectual Property

Prepared by:
Maica Regina M. Escosio

Objectives

At the end of this module, you are expected to:

- distinguish ethical and unethical practices in communication;
- identify ethical breaches in workplace scenarios;
- evaluate ethical practices of companies; and
- apply communication principles and ethics in reasoning.

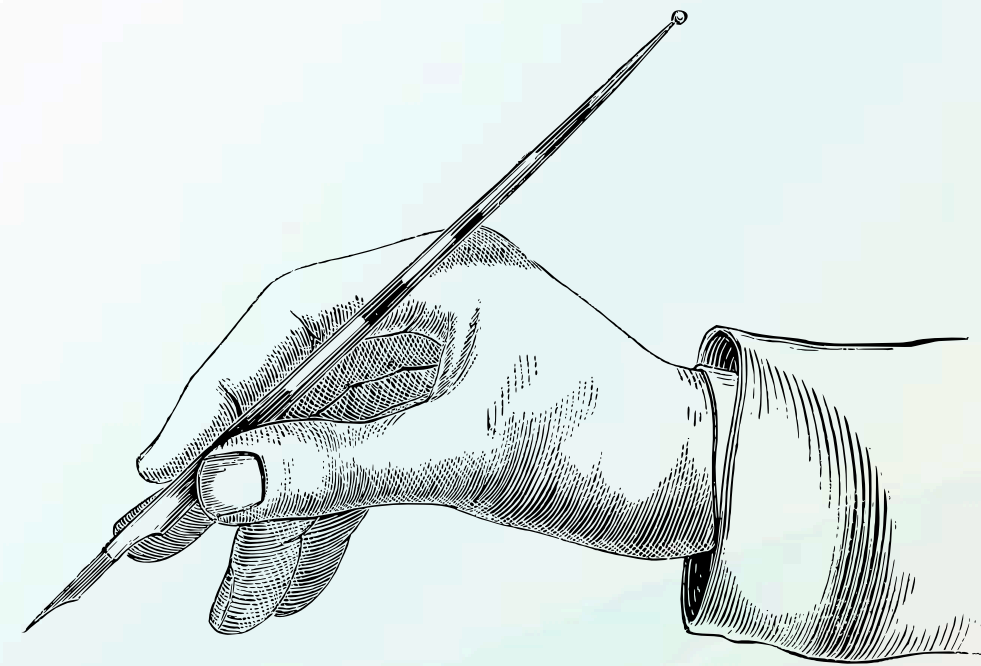

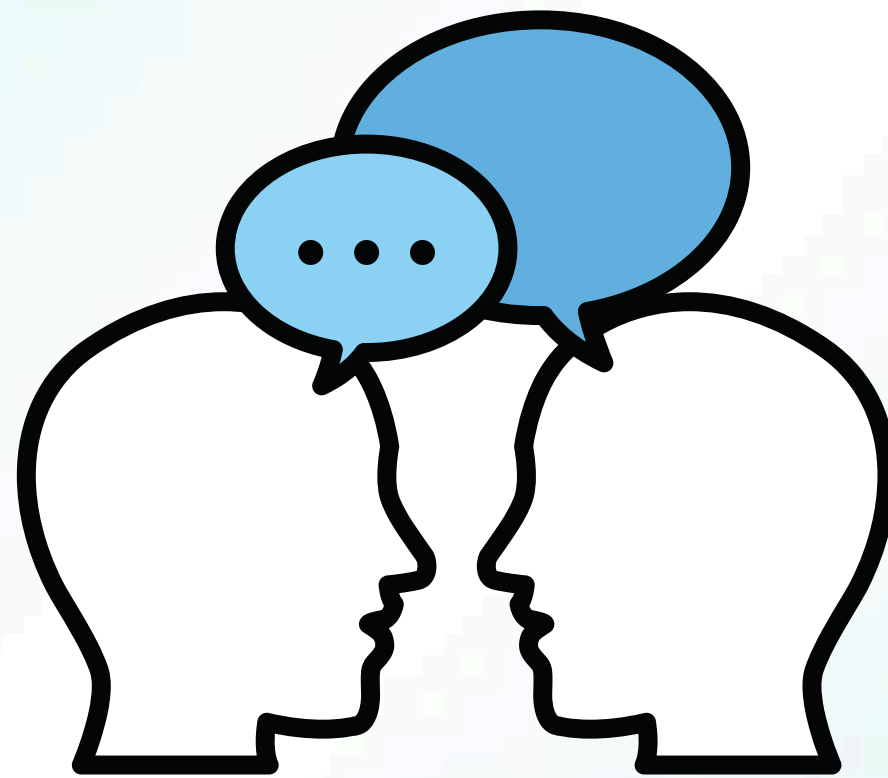

Communication Ethics

Includes **discernment**
and **decision-making**
about what is good,
right, and virtuous to
communicate

“Communication ethics concerns the creation and evaluation of goodness in all aspects and manifestations of communicative interaction.”

Lipari (2017)

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

General Characteristics of Communication Ethics

General Characteristics of Communication Ethics

- Heterogeneity
- Interconnectivity
- Historicity

Lipari (2017)

Technology Driven by Innovation

Heterogeneity

Communication ethics has this characteristic due to the multiple “**ethical concerns, disciplinary contexts, theoretical perspectives, and modes of reasoning**” it can follow.

Example: Queries regarding harassment can involve the values of freedom of speech balanced against freedom from intimidation and harassment

Lipari (2017)

Interconnectivity

“Interdependency manifests in the recognition that **humans are socially embedded beings** and therefore that no self exists completely independent of the social conditions (e.g., language, customs, narratives, hierarchies) from which that self emerged.”

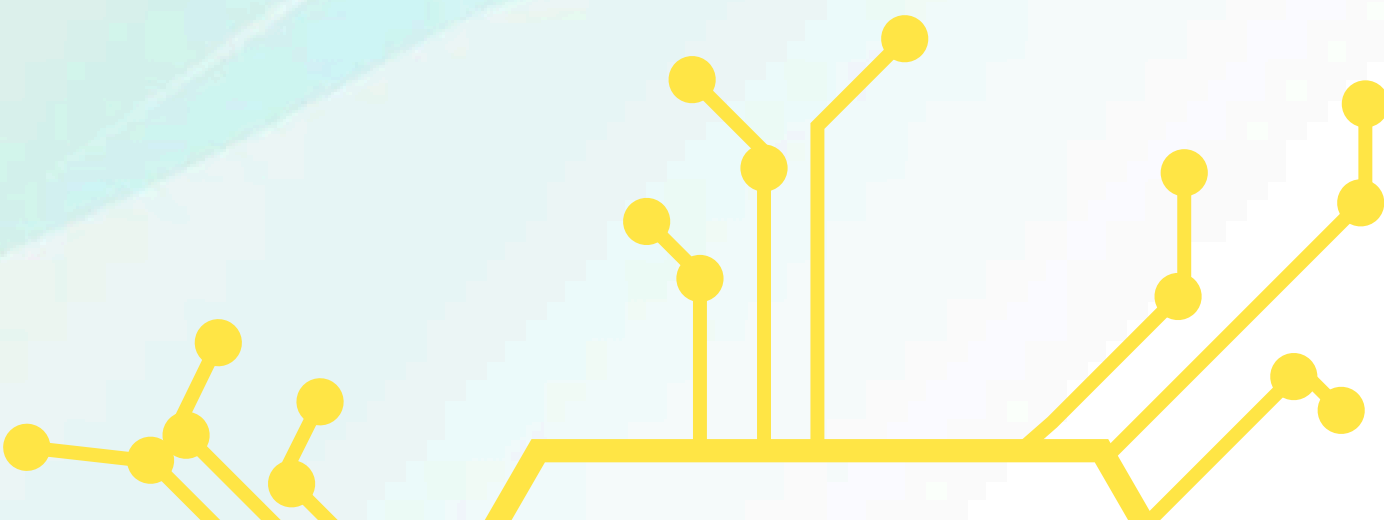

Lipari (2017)

Historicity

“Communication ethics is also deeply responsive to the **historical events, conditions, and conventions** that give rise to every communicative interaction.”

“What stories are told, from whose point of view? When or how are these stories punctuated, and who speaks and who is ignored?”

Lipari (2017)

Basic Ethical Values

Basic Ethical Values

- Truth
- Justice
- Freedom
- Care
- Integrity

Truth

- The message being communicated must be true and in accordance with fact or reality.

Justice

- Communication can be used to achieve sets of conditions that are fair and equitable.
- All communicators must be treated impartially.

Freedom

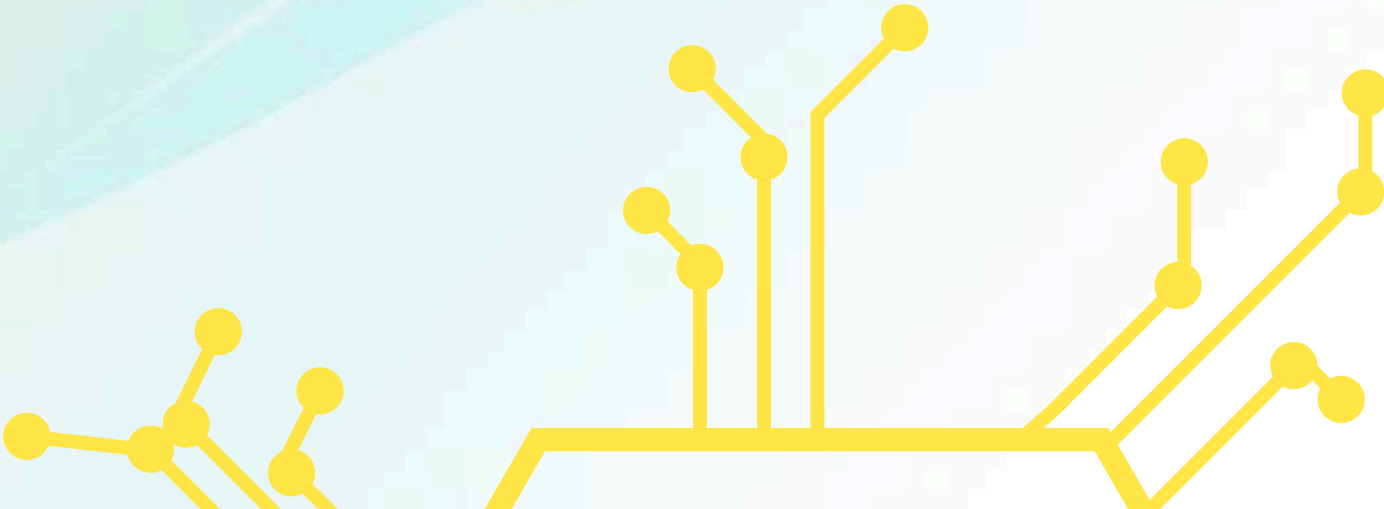

- All have the right to interact and communicate with each other.

Care

- Ethical communicators not only think of the message or the medium. They are also tactful and mindful--choosing their words well, along with the manner, time, and place of communication.

Integrity

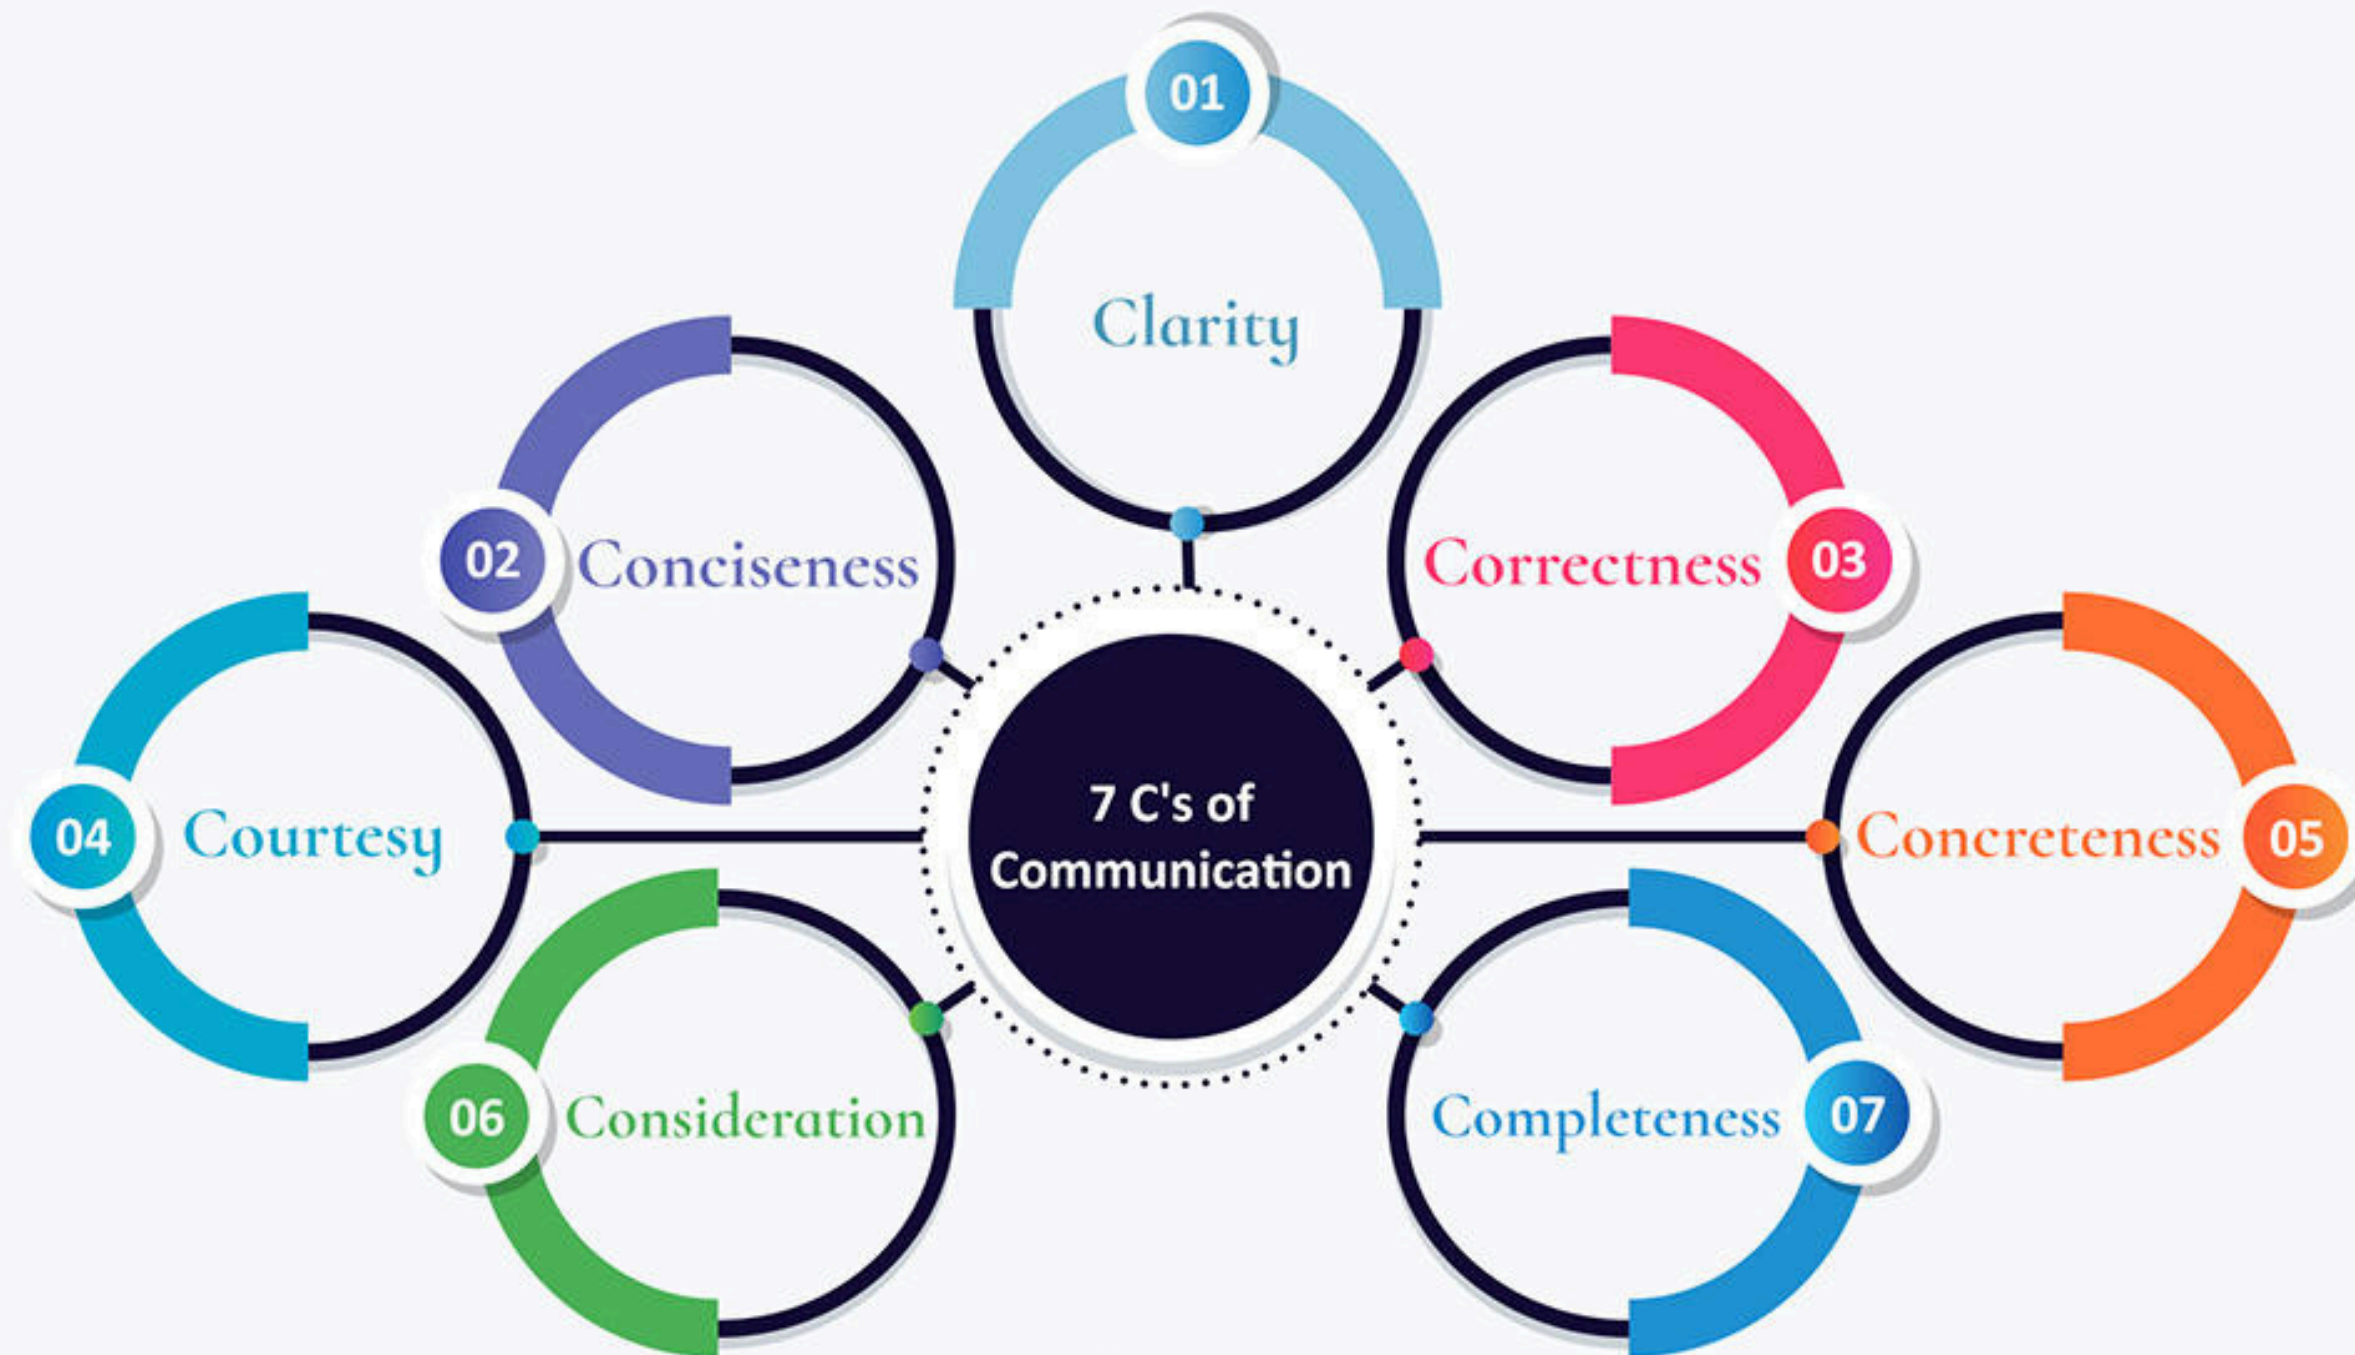

- Good communicators always abide by their moral and ethical principles. They also behave honorably when communicating. Their intentions, behavior, language, and others align and are consistent.

7 Cs of Communication

7 Cs of Communication

(Contractjobs, 2022)

7 Cs of Communication

1) **Clarity** - “ability of a message to be readily grasped by the audience”

How to achieve this?

- Utilize simple language
- Avoid jargon and challenging vocabulary
- Have a message focused on a central idea

Porwal (2023)

7 Cs of Communication

2) **Completeness** - the message must include all relevant information so the audience can fully understand

How to achieve this?

- Consider the context to determine the details to include
- Organize the message well

Porwal (2023)

7 Cs of Communication

3) **Conciseness** - expressing the message in the shortest way possible while retaining its essence

How to achieve this?

- Be clear and direct
- Avoid unnecessary details

Porwal (2023)

7 Cs of Communication

4) **Correctness** - use of correct and appropriate language, grammar, and punctuation

How to achieve this?

- Check for grammatical and typographical errors
- Check for factual inaccuracies

Porwal (2023)

7 Cs of Communication

5) **Courtesy** - respect and consideration for the audience

How to achieve this?

- Speak politely
- Have empathy
- Avoid language or actions that are deemed disrespectful

Porwal (2023)

7 Cs of Communication

6) **Consideration** - “entails recognising the needs, interests, and concerns of the audience by placing oneself in their position”

How to achieve this?

- Customize message to the audience’s preferences and expectations
- Consider factors like the audience’s level of knowledge, communication style, culture

Porwal (2023)

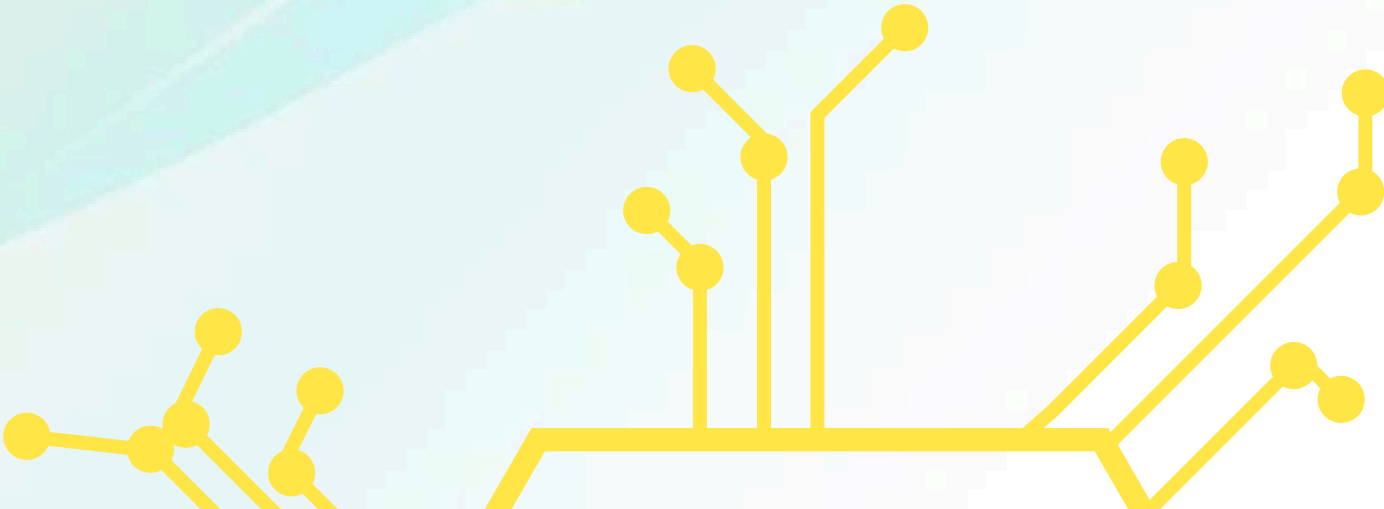

7 Cs of Communication

7) **Concreteness** - supporting the message with specific and accurate examples

How to achieve this?

- Avoid ambiguous messages
- Use images or illustrations to help with the visualization of the message

Porwal (2023)

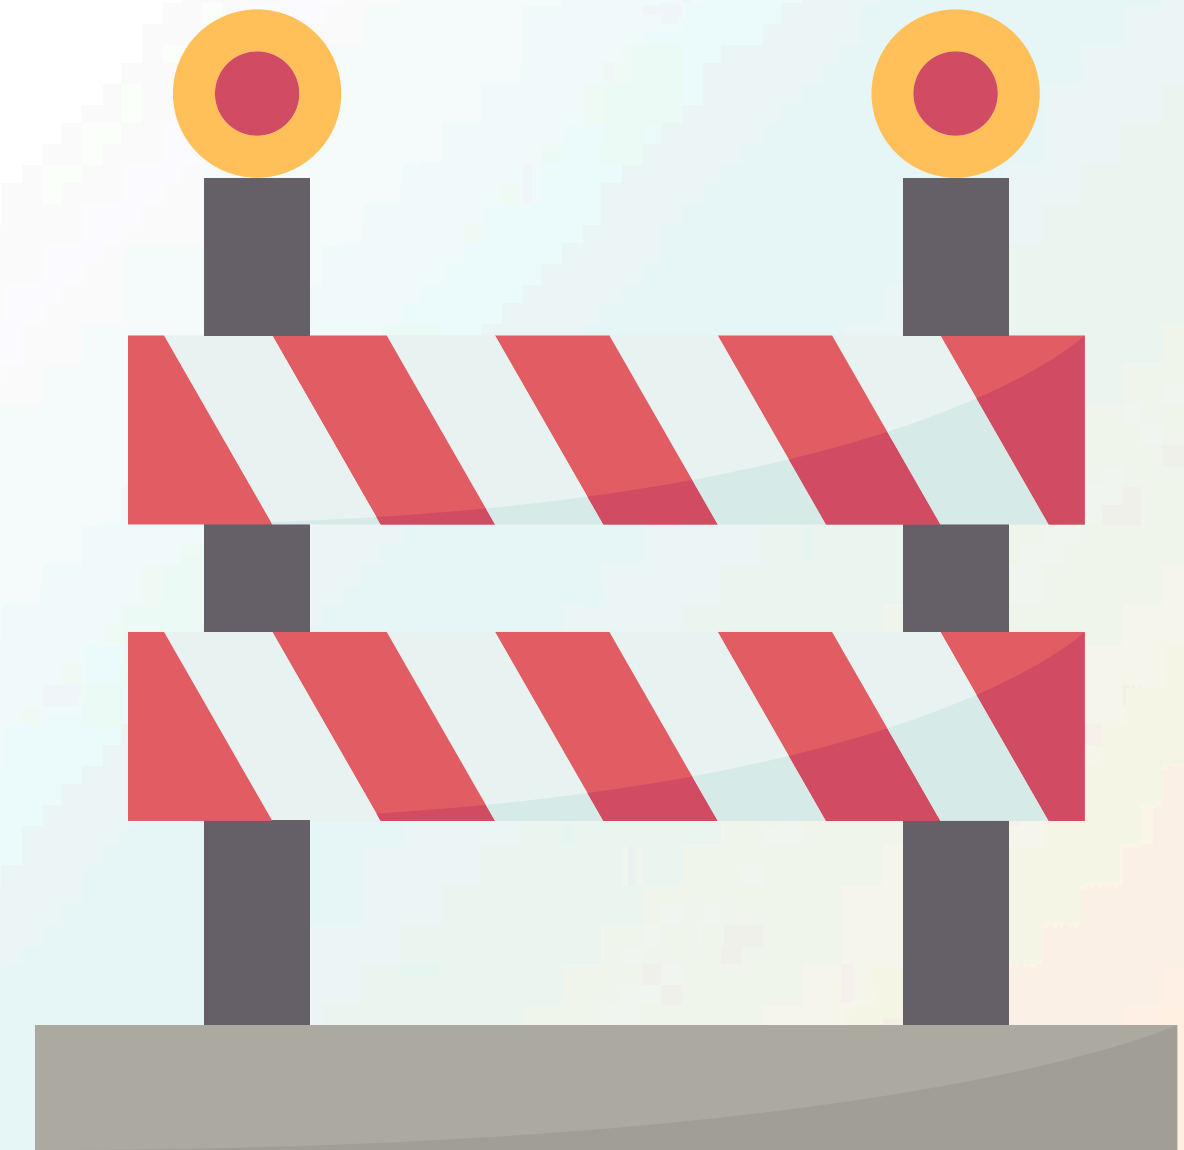

Two Common Roadblocks to Communication Ethics

Two Common Roadblocks to Communication Ethics

- Ethical nearsightedness
- Rationalization

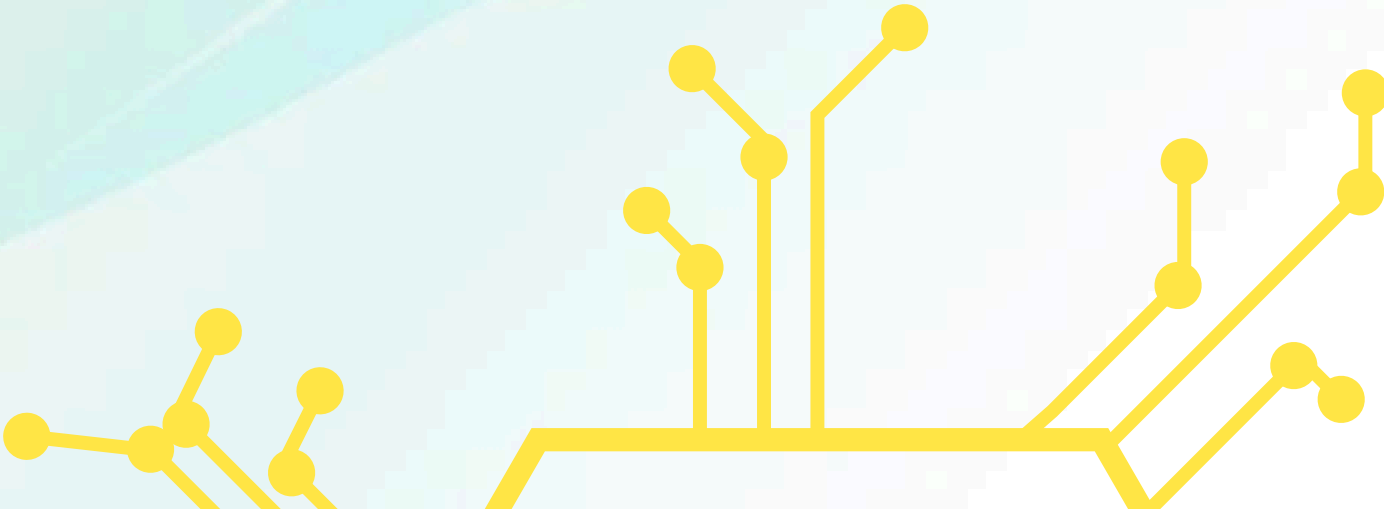

Ethical Nearsightedness

- One's inability to recognize and think about ethical issues
- It's the habit of looking at issues only from your point of view
- Can be overcome by *moral imagination

*Moral imagination - According to philosopher Mark Johnson, it is envisioning all the possibilities that can stem from a situation to be able to solve an ethical concern (McCombs School of Business, 2018)

Rationalization

- It's the human tendency to base decision on personal interests
- It cannot withstand critical evaluation by others because it is not based on general truth

Intellectual Property

Intellectual Property

- Refers to creations of the mind such as
 - inventions
 - design
 - brand name
 - literary and artistic works

IPOPHL (n.d.)

Intellectual Property

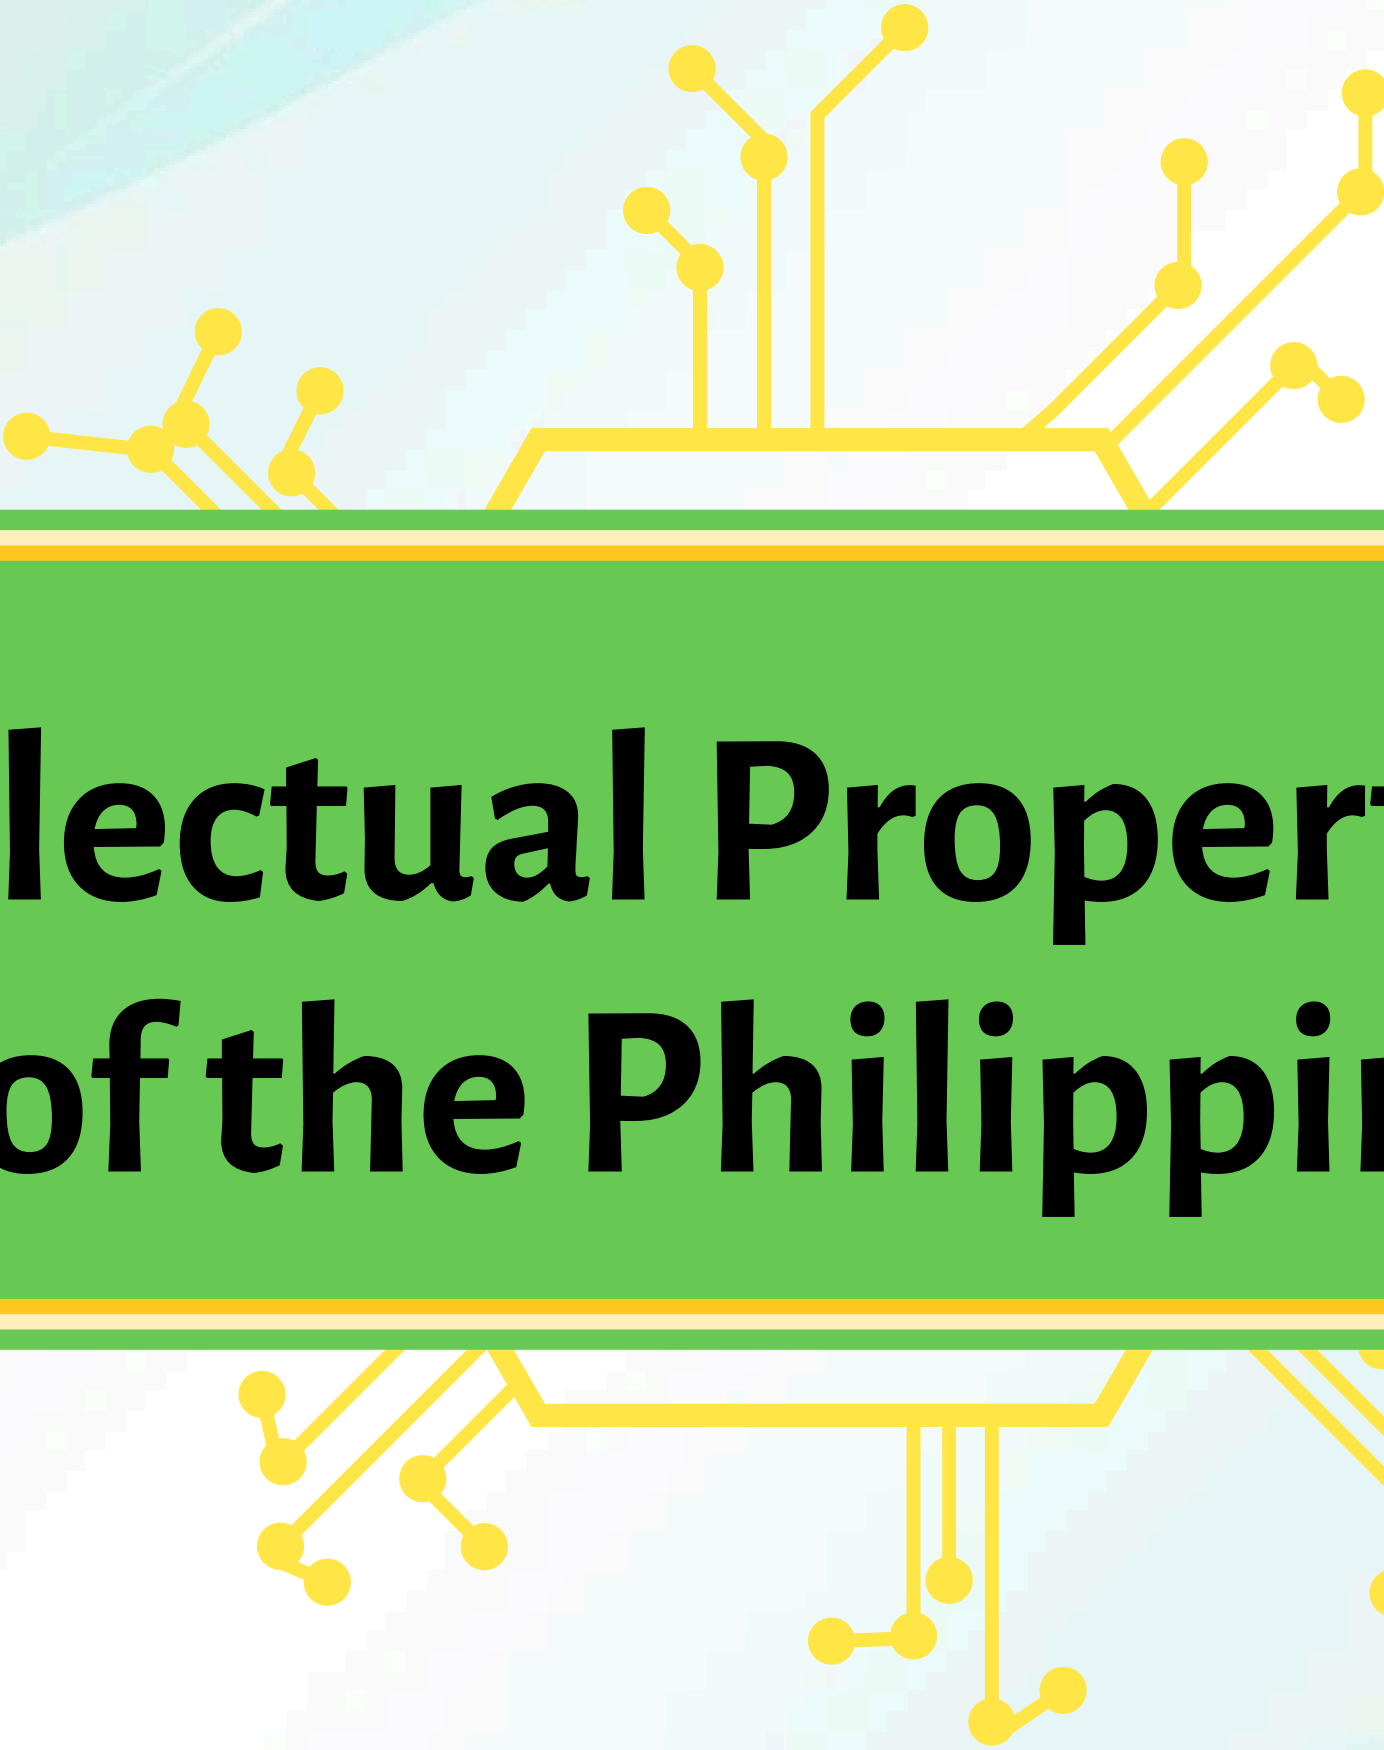

- Divided into two categories:
 - 1) Industrial property - includes patents, trademarks, geographic indications, utility models, industrial designs, topographies of integrated circuits, trade secrets

OVCRE (n.d.)

Intellectual Property

- Divided into two categories:
 - 1) Patents - include inventions and processes
 - 2) Copyrights and neighboring rights - include scientific, scholarly, artistic, and literary works (e.g., musical works, dramatic works, paintings, databases and computer software, etc.)

OVCRE (n.d.)

Intellectual Property Code of the Philippines

Intellectual Property Code of the Philippines

- Republic Act No. 8293 was signed into law on June 6, 1997
- Established the IPOPHL or the Intellectual Property Office of the Philippines
- Details the process of patent application, licensing, transmission of IP rights
- Includes the law on copyright
- Specifies the term of protection and the penalties for infringement

Intellectual Property Code of the Philippines

“Under the IP code, inventions are protected by **patents**; utility models and industrial designs by their **registration**; and computer programs, literary, scholarly, and artistic works by **copyright**.”

OVCRE (n.d.)

Para ka na ring nanalo ng **gold** 'pag registered ang **IP** mo!

● Exclusive rights

As the owner, you can use, sell, license, and enforce rights over your creations.

● Market leverage

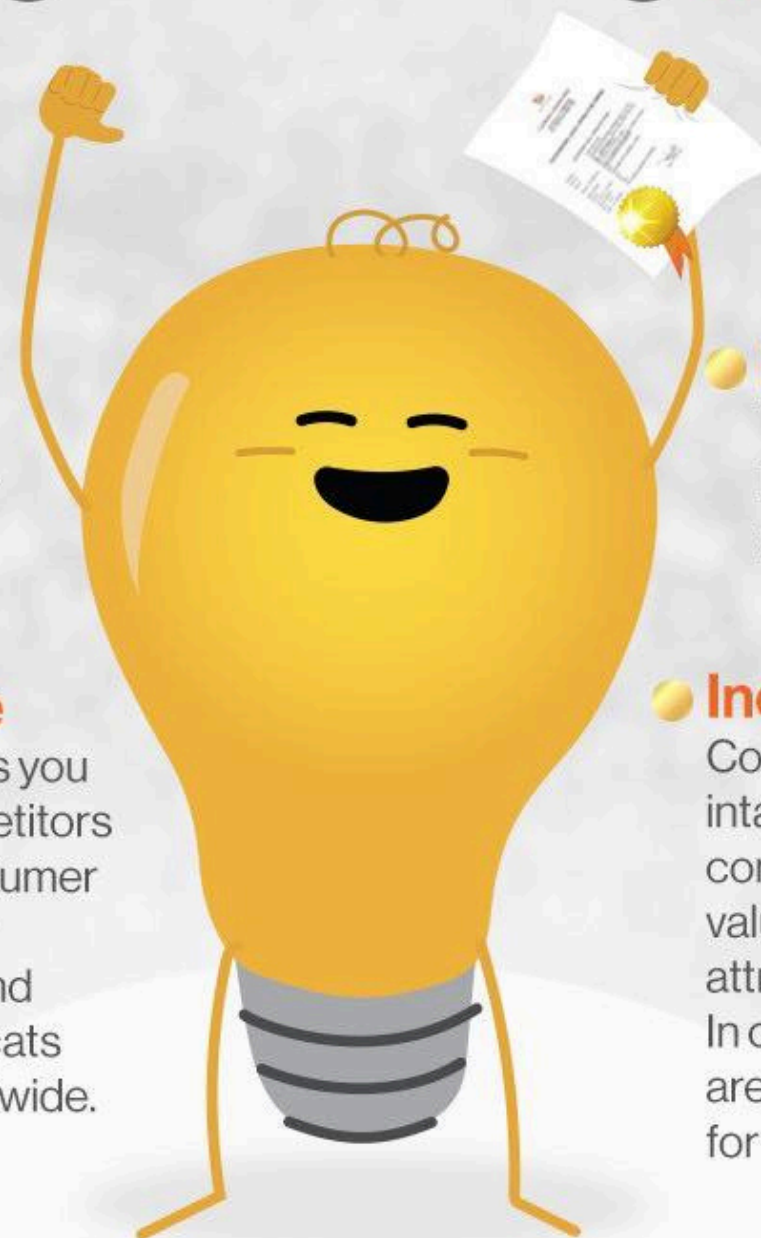

Brand recognition sets you apart from your competitors which could gain consumer trust and protect your innovative products and trademark from copycats locally and even worldwide.

● Legal protection

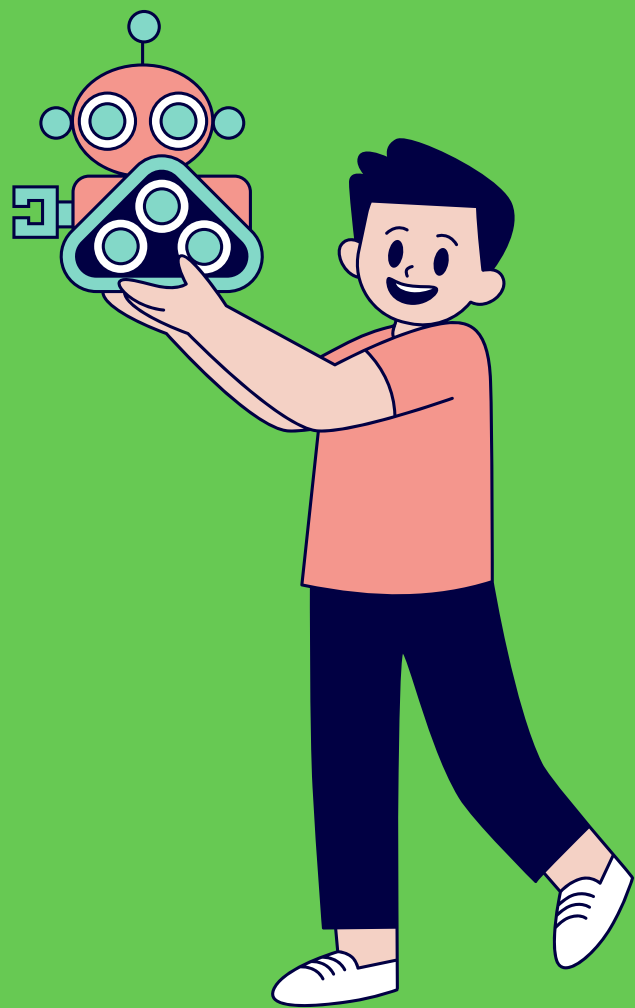

This provides a stronger basis on taking legal action against infringers.

● Increased value

Considered as an intangible asset, this will contribute to the overall value of your business and attract potential investors. In other countries, IP assets are acceptable collateral for loans.

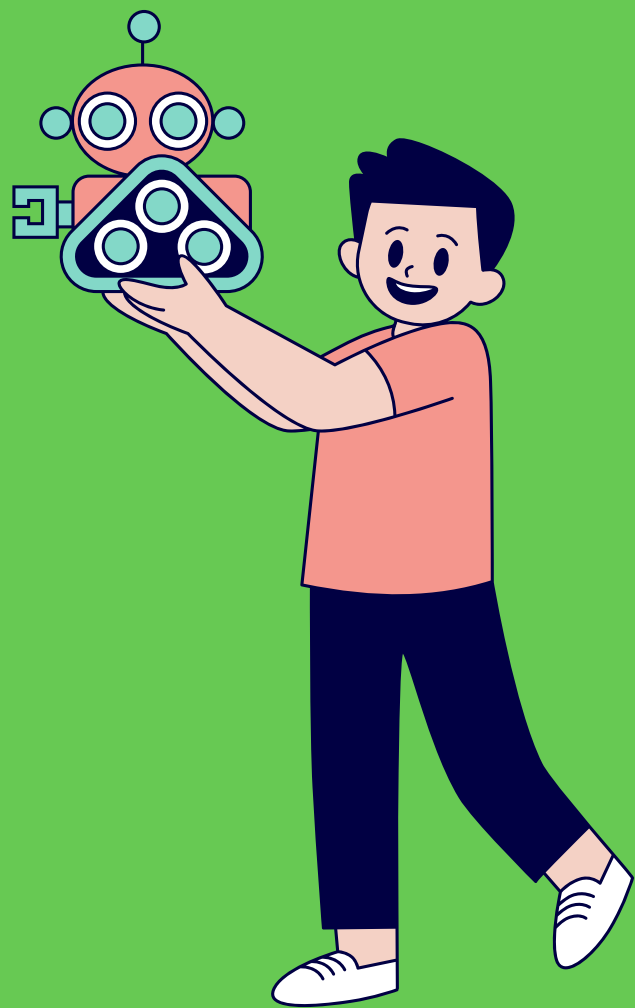

Patents

- Granted to patent owner by the State through the IPOPHL
- Applies to a “product, process, or an improvement of product or process for a specified period in exchange of the full disclosure of the invention”

OVCRE (n.d.)

Patents

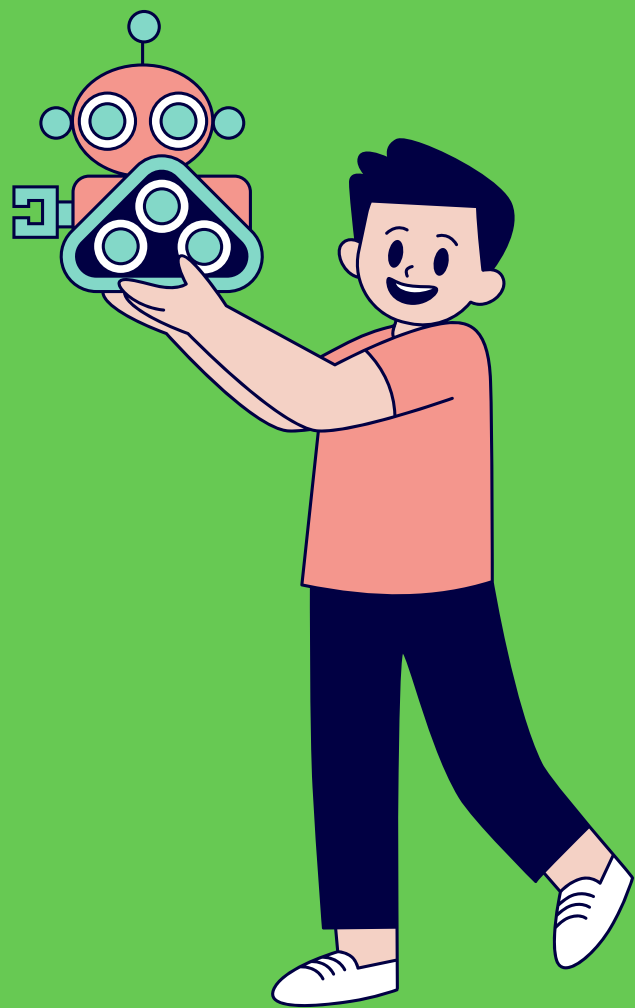

- Must meet three basic criteria:

- 1) Novelty or newness
- 2) Inventive step - the creation of the invention must have an inventive step; invention must not be obvious to a person knowledgeable of the art
- 3) Industrial applicability - must be useful like a solution beneficial to the public

OVCRE (n.d.)

Technology Driven by Innovation

Patents

- Invention protected for 20 years from filing date of application
- Owner can prohibit any unauthorized person or entity from using, selling, or making of product or process
- Right is transferable or can be assigned through licensing contracts

OVCRE (n.d.)

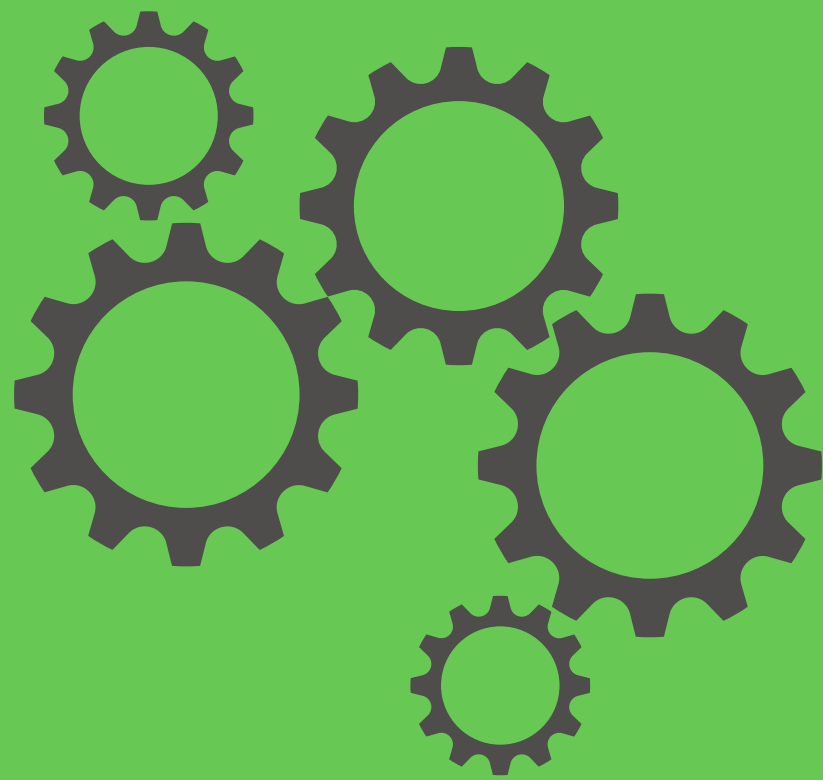

Utility Models

- AKA petty patent
- “invention must be new and industrially applicable”
- Protection of 7 years, without renewal

OVCRE (n.d.)

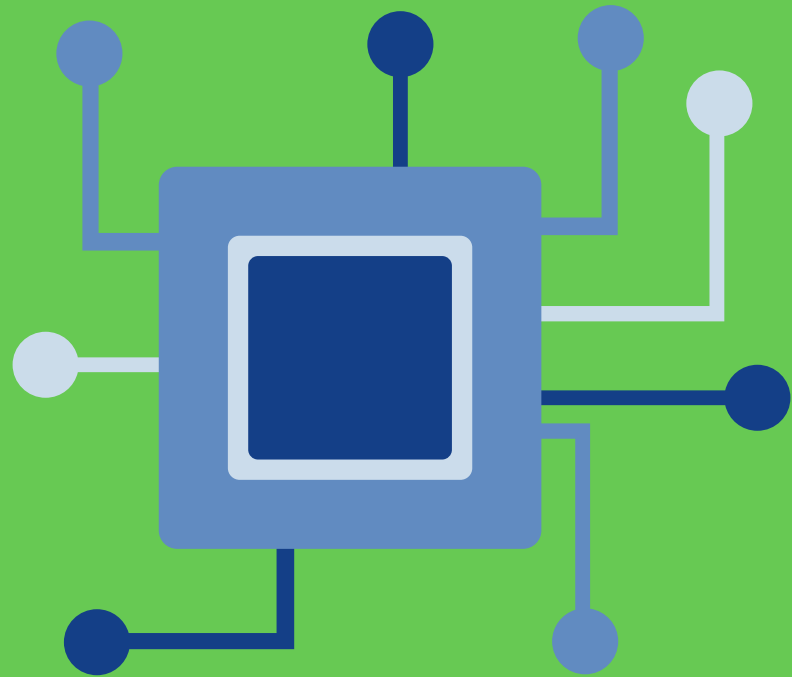

Industrial Design

- “consists of composition of lines or colors or any three-dimensional forms which serve as a pattern for industrial products or handicrafts”
- Protection of 5 years; renewable for 2 consecutive periods of 5 years

OVCRE (n.d.)

Layout Design of Circuits

- the topography of circuits is usually utilized in microchips and semiconductor chips for manufacturing
- Protection of 10 years, without renewal

OVCRE (n.d.)

Trademarks

- “may consist of words, names and first names, signatures, acronyms among others”
- Can indicate source; guarantee quality; used for advertising
- granted to owners when registered with the IPOPHL
- Protection of 10 years, renewable for succeeding periods of 10 years

OVCRE (n.d.)

Technology Driven by Innovation

Copyrights

- To prohibit or authorize the reproduction or copying of literary or artistic works
- Economic rights - enable creators to derive economic or financial reward from their works
- Moral rights - enable claim of authorship and have it recognized

OVCRE (n.d.)

Technology Driven by Innovation

Copyrights

- Protection granted over the lifetime of the author and 50 years after their death

OVCRE (n.d.)

- Under PH laws, copyright infringement is committed when there's a violation of any of the exclusive economic or moral rights of the copyright owner
- Owner can file a civil, criminal, or administrative action
- Punishable by imprisonment of 1-3 years; fine of Php 50,000-150,000

IPs in your Valentine's Date

Trademarks - brand names and logos of your date's outfit

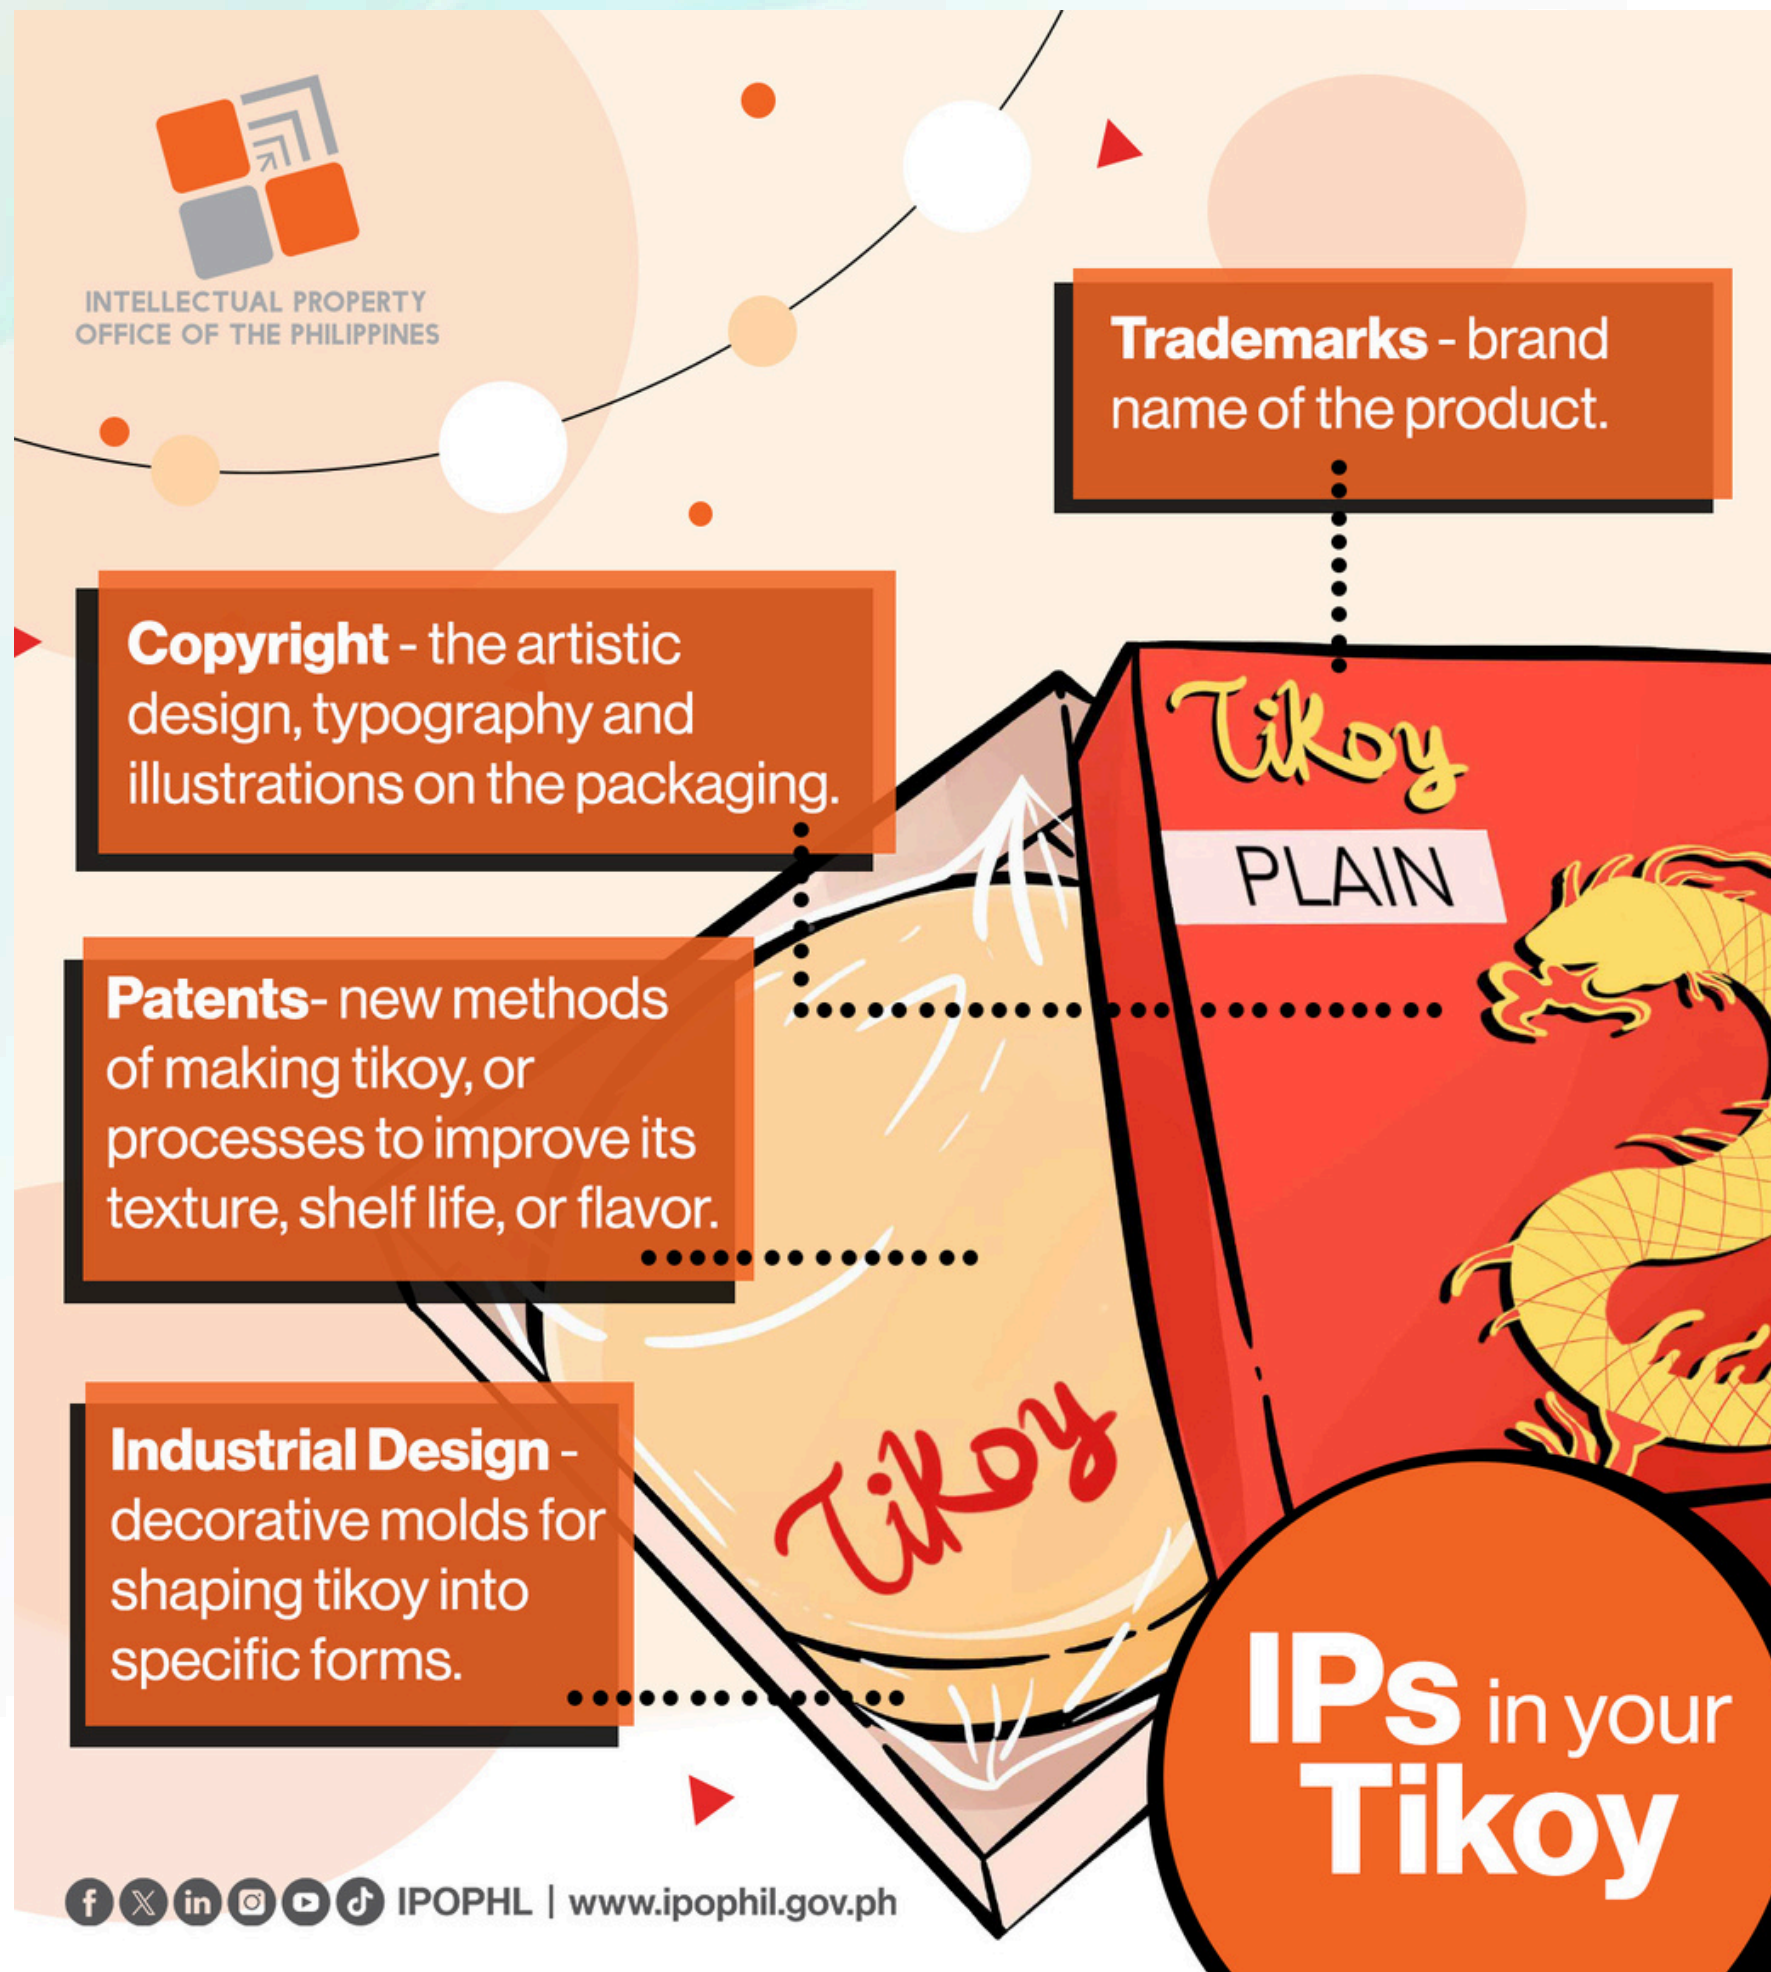

Industrial Design - a special-shaped chocolate box with a distinctive visual appearance

Copyright - love poems and songs you wrote

Utility model - a teddy bear that responds to touch with a voice message

Patent - a method used to preserve flowers
